

Global Consultation on social contracting: working towards
sustainable responses to HIV, TB and malaria
through government financing of programs implemented
by civil society,
5-6 October New York, USA

Iva Jovović, FLIGHT/ LET

Partner za razvoj
zdrave zajednice...

Funding for 2016/2017- NGOs

- 5.6 million HRK or 850.000 USD for prevention activities (minus HTC, media campaign and part of psychosocial support at the hospital)
- increase from previous call in 2013
- three new NGOs implementing HR

Issue:

- prevention among MSM
- sexual education in schools introduced but with problems

Precondition

Mutual trust

Understanding

*requirements and procedures by government from contracts, financial reporting, issuing of a call...

*NGO and its values and commitment to work, lack of administrative staff and resources, understanding of the work and related issues: from night shifts to spending gas on AC/heating in the car, NGOs need funding for costs on a daily base (from gas to salaries to commodities)- **delays in contracting or disbursement of funds might lead to closure of programs (in prevention activities easier to loose a client than to engage new ones !!!)**

Partnership: government-health institutions-NGOs working together for clients/beneficiaries

Coordination of activities (focus in shift in use of drugs-new drugs and festivals, migrant crisis: undocumented migrant and unaccompanied minors; targeting geographical coverage)

Human resources (both on government and NGO side: experienced staff)

Financial resources

Road to success in Croatia

Mutual trust, understanding, partnership and coordination !!!

- Previous calls/ experience in social contracting since 1999/2000
- PR was Ministry of Health- led to continuation of programs
- GF grant was focused on scaling up interventions (HR already existed, LGBT organisations and 1st Gay Pride in 2002, link between programs for people who use drugs and sex workers, testing/though without counselling, initiative/idea how to organise psychosocial support to people living with HIV)
- Biggest increase in surveillance- linked to WHO Knowledge Hub/Collaborative Centre
- UNAIDS, UNICEF and UNDP projects for M&E and targeting gaps (policy level)
- Annual meetings and coordination (by GF and UN Theme Group after the grant closure)
- One year before closure of grant: agreement on minimum and maximum cost for services

How to best use system developed by PR (if not a governmental body):

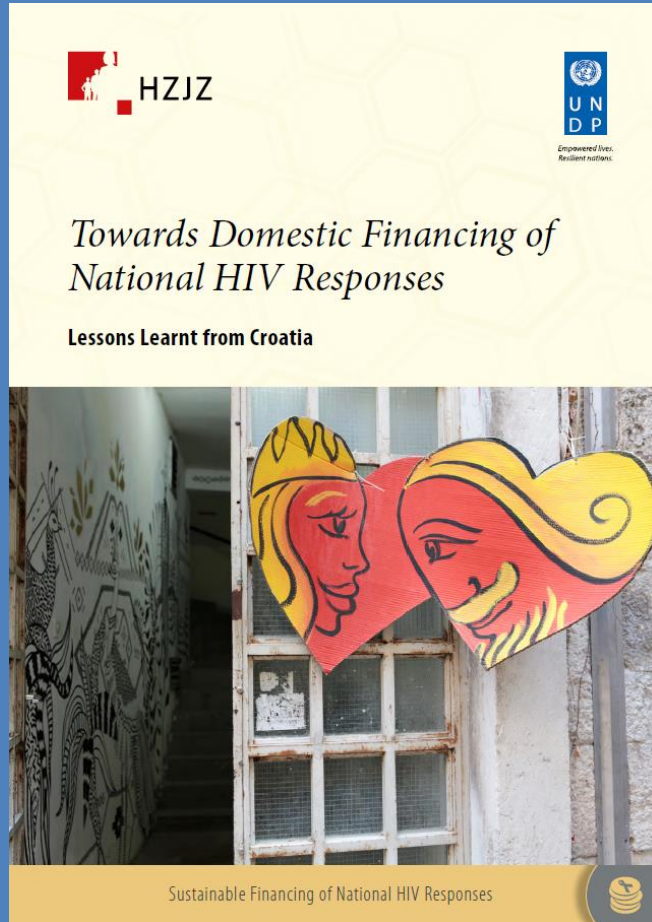

Use the transitional plans, build on existing structure !!!

- M&E system in place
- Reporting system developed
- Audits/field visits developed
- Human resources (experienced technical staff)

- **Mutual trust, understanding, partnership and coordination !!!**

Greatest benefits – continuation of HIV/AIDS preventive activities
